CLAIM AMENDMENTS:

1-8 cancelled

9. (currently amended) A disposable piece of clothing, suitable for medical, chemical or biotechnological use to protect a ~~person~~user wearing the clothing from liquids or microorganisms, the clothing comprising:

at least one air-permeable outer layer having a non-woven laminated material made from ~~spunbond and~~ at least one meltblown layer sandwiched between two spunbond layers ; and

a laminated liquid-impermeable, air permeable inner barrier layer connected, at least in sections, to regions of a side of said outer layer facing the ~~person~~user, wherein said liquid-impermeable barrier layer comprises having an outer liquid impermeable layer and an inner ~~an~~ air-permeable, non-woven sheet of laminated material layer facing the user, wherein the clothing comprises a front part and integrally connected sleeves.

10. (cancelled)

11. (currently amended) The disposable piece of clothing of claim 9, wherein said outer layer comprises a spunbond/meltblown/spunbond (SMS), ~~a spunbond/meltblown (SM)~~, or a spunbond/meltblown/meltblown/spunbond (SMMS) laminated material.

12. (previously presented) The disposable piece of clothing of claim 9, wherein said barrier layer comprises a polyethylene sheet filled with

an organic and/or inorganic filler and is mechanically finished to produce microporosity.

13. (previously presented) The disposable piece of clothing of claim 12, wherein said filler comprises calcium carbonate.
14. (previously presented) The disposable piece of clothing of claim 9, wherein said barrier layer is connected to said outer layer in a material-bonding fashion.
15. (previously presented) The disposable piece of clothing of claim 14, wherein said material-bonding comprises glue or welding connections.
16. (currently amended) The disposable piece of clothing of claim 9, wherein said barrier layer is disposed proximate said sleeves or proximate lower sleeve ends in a region of ~~the persons'~~user hands to beyond ~~the persons'~~user elbows and/or in a breast region of the ~~person~~user, wherein said barrier layer extends in the breast region beyond ~~the persons~~user knees.
17. cancelled.
18. (currently amended) The disposable piece of clothing of ~~claim 17~~claim 9, wherein regions of the sleeves are formed by an other material
19. (previously presented) The disposable piece of clothing of claim 18, where said other material is a non-woven sheet of laminated material.
20. (currently amended) The disposable piece of clothing of ~~claim 10~~claim 9, wherein said sleeves are Raglan sleeves.

21. (previously presented) The disposable piece of clothing of claim 9, wherein seams in the clothing are folded-over seams or overlapping seams.
22. (new) A disposable piece of clothing, suitable for medical, chemical or biotechnological use to protect a user wearing the clothing from liquids or microorganisms, the clothing comprising:
- at least one air-permeable outer layer having a non-woven laminated material made from at least one meltblown layer sandwiched between two spunbond layers; and
a laminated liquid-impermeable, air permeable inner barrier layer connected, at least in sections, to regions of a side of said outer layer facing the user, said barrier layer having an outer liquid impermeable layer and an inner non-woven layer facing the user, wherein the clothing comprises a front part and integrally connected sleeves, the clothing having a water vapor permeability of at least 2,000 g/m² at reinforced locations thereof.
23. (new) A disposable piece of clothing, suitable for medical, chemical or biotechnological use to protect a user wearing the clothing from liquids or microorganisms, the clothing comprising:
- at least one air-permeable outer layer having a non-woven laminated material made from at least one meltblown layer sandwiched between two spunbond layers; and
a laminated liquid-impermeable, air permeable inner barrier layer connected, at least in sections, to regions of a side of said outer layer facing the user, said barrier layer having an outer liquid impermeable layer and an inner non-woven layer facing the user, wherein the clothing comprises a front part

and integrally connected sleeves, the clothing having a penetration resistance to water of at least 150 cm at reinforced locations thereof.

24. (new) A disposable piece of clothing, suitable for medical, chemical or biotechnological use to protect a user wearing the clothing from liquids or microorganisms, the clothing comprising:

a front part having at least one air-permeable outer layer containing a non-woven laminated material made from at least one meltblown layer sandwiched between two spunbond layers and a laminated liquid-impermeable, air permeable inner barrier layer connected, at least in sections, to regions of a side of said outer layer facing the user, said barrier layer having an outer liquid impermeable layer and an inner non-woven layer facing the user; and sleeves integrally connected to said front part, said sleeves consisting essentially of a laminated liquid impermeable, air permeable barrier layer containing an outer non-woven layer and an inner liquid impermeable layer facing the user.
